**Lumache** (/lu'make/) is a Python library for cooks and food lovers that creates recipes mixing random ingredients. It pulls data from the [Open Food Facts database](#) and offers a *simple* and *intuitive* API.

Check out the [Usage](#) section for further information, including how to [Installation](#) the project.

---

**Note:** Lumache has its documentation hosted on Read the Docs. This is a test run.

---

## CONTENTS

## 1.1 Usage

### 1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

### 1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

`lumache.get_random_ingredients(kind=None)`

Return a list of random ingredients as strings.

**Parameters** `kind` (`list[str]` or `None`) – Optional “kind” of ingredients.

**Raises** `lumache.InvalidKindError` – If the kind is invalid.

**Returns** The ingredients list.

**Return type** `list[str]`

The `kind` parameter should be either `"meat"`, `"fish"`, or `"veggies"`. Otherwise, `lumache.get_random_ingredients()` will raise an exception.

**exception** `lumache.InvalidKindError`

Raised if the kind is invalid.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

## 1.2 API

|                |                                                     |
|----------------|-----------------------------------------------------|
| <i>lumache</i> | Lumache - Python library for cooks and food lovers. |
|----------------|-----------------------------------------------------|

---

### 1.2.1 lumache

Lumache - Python library for cooks and food lovers.

#### Functions

---

|                                        |                                                 |
|----------------------------------------|-------------------------------------------------|
| <i>get_random_ingredients</i> ([kind]) | Return a list of random ingredients as strings. |
|----------------------------------------|-------------------------------------------------|

---

#### Exceptions

---

|                         |                                |
|-------------------------|--------------------------------|
| <i>InvalidKindError</i> | Raised if the kind is invalid. |
|-------------------------|--------------------------------|

---
